

**KGV RESEARCH
THREE HALFPENCE DIE I
NEW DISCOVERIES, PLATINGS & DESCRIPTIONS**

By Bill Fiora
January 2018

1. New Discoveries

22L27

A block of 4 stamps recently offered on eBay as 22L21/22/27/28, confirmed to be correct by the very prominent "HALEPENCE" flaw on L22, identified L27 as having a flaw in the RVT.

Close inspection of the RVT flaw indicates it to be a printing defect; however another small flaw in the bottom frame is confirmed to be constant from a number of similar blocks.

As we have not previously plated 22L27, it is now plated with description as follows:

Bottom Frame: A small white flaw in the centre of the outer Coloured border frame 2mm from the BRC.

Note: Care should be exercised when plating this flaw, as there are a number of stamps with similar markings, and of particular note is 19R59.

22L27

2. Revised Descriptions

16R44 has 2 states

State 1

(a) Shading behind kangaroo: Break, 0.25mm wide, almost at left end of 19th free line (counting down from bottom of left wattle stem).

State 2

(a) As before

(b) CVT: White flaw off top of centre of "R" of THREE, joining POSTAGE band above.
